

# SUPERWASH

## Integrate The SUPERWASH XP-550 Into Your Print Shop

EAST DORSET, VT – [May 27, 2015]

*Engineered Printing Solutions* prides itself in offering the best pad and digital ink jet printers on the market, along with providing a full complement of auxiliary equipment to enhance any print production environment.

EPSVT offers a large capacity pneumatic wash unit, the SUPERWASH XP-550 for cleaning sealed ink cups, plates and other printing accessories. This unit has a 550mm diameter basket, entirely constructed of stainless steel with an active carbon filter and exhaust device. There are eight pressure spray nozzles located above, below and on the sides of the tub for optimum cleaning. The SUPERWASH XP-550 includes a pneumatic timer, pressure regulator, an internal filter for the solvent, plus a door opening safety device. The washing process takes between 10 to 20 minutes of unattended operation time to clean and load the parts. Depending on your cleaning needs, EPSVT has other wash units to choose from including the SUPERWASH XP-400 and MINIWASH units.
