

VARIABLE DATA PRINTING

EPSVT Introduces Variable Data Printing Within the RIP

EAST DORSET, VT – [July 14, 2015]

Engineered Printing Solutions introduces true Variable Data Printing within the ColorPrint RIP software for the fJET-24 and the new fJETXL industrial inkjet flatbed systems. The new ColorPrint RIP software is designed to incorporate several types of objects within a single image file such as text, dates, times, barcodes and numeric serialization, without the use of a third party program.

ColorPrint's new features streamline the printing process for many applications including promotional products, security printing, label printing, custom signage and more. The new features are intuitive and easy to implement into any existing workflow. Engineered Printing Solutions offers this new feature as a free upgrade for existing customers who utilize the fJET-24 and fJETXL flatbed systems.
